EDUCATION

University of Stavanger

Master of Science in Data Science — Thesis: GRAG vs RAG — limiting LLM hallucinations with knowledge graphs (partner: Laerdal)

Nitte Meenakshi Institute of Technology

Bachelor of Engineering in Computer Science

Bangalore, India

2017 – 2021

EXPERIENCE

Nivel AS

Data Scientist

Stavanger, Norway

March 2025 – Present

- Built and deployed a BigQuery MCP server (Anthropic Model Context Protocol) enabling agentic, tool-using LLM access so non-technical colleagues query production data in plain language.
- Took AI and analytics features from prototype to production: analytics platform (Vue.js, Chart.js, Vite) on a BigQuery backend, plus ETL pipeline APIs into Google Cloud.
- Run infrastructure on Kubernetes, GitLab CI/CD, and AWS; integrated GIS into production and maintained the underlying databases and reporting.

Baseline Energy

ML / Python Developer

Stavanger, Norway

October 2024 – April 2025

- Built LSTM forecasting models on the Euroflex project to shift electricity consumption for grid reliability and cost-efficiency.
- Developed and deployed FastAPI services (Redis, Docker, GitHub Actions CI/CD) on AWS/GCP; refactored legacy code for performance and reliability.

DNB (largest bank in Norway)

Software Engineering Intern

Oslo, Norway

June 2023 – August 2023

- Delivered banking software on the Financial Management Data Refinery team: designed a RESTful API for a mainframe-to-cloud migration (Azure, Python, Snowflake, Pydantic).
- Built a Streamlit dashboard to monitor the data-refinery engine's health, working within a regulated banking environment.

University of Stavanger

Teaching Assistant

Stavanger, Norway

August 2023 – Present

- TA for Cloud Computing, Data-Intensive Systems, Intro to Data Science, and Databases; ran labs and mentored students across teams (Spark, Databricks, Hadoop, SQL, Kubernetes).

Hack the Climate (Nordic Edge)

API & GIS Developer

Stavanger, Norway

December 2023 – May 2024

- Built LSTM and DDPG models to forecast agricultural nutrient runoff; delivered a FastAPI/AWS GIS service with local authorities (5-person team).

SKILLS

LLM & Agentic AI: LLMs, RAG/GRAG, Knowledge Graphs, Embeddings & Vector DBs, Agentic workflows, Tool use, LangGraph, MCP servers, Anthropic, Prompt design

ML & Data Science: Python, Machine Learning, Deep Learning, NLP, TensorFlow, LSTM, DDPG, LLM evaluation

Cloud, Deployment & MLOps: Azure, AWS, GCP, Docker, Kubernetes, GitLab CI/CD, GitHub Actions, REST APIs, FastAPI

Data & Analytics: BigQuery, Snowflake, Databricks, Spark/PySpark, SQL, ETL/ELT, Looker Studio

PROJECTS

Medical Emergency Agent

Agentic RAG over a Knowledge Graph

2025

LLM Agent, RAG, Vector Store, Tool use, Gradio

LLM agent answering medical-emergency queries via retrieval-augmented generation over a property-graph knowledge store, vector store, and call transcripts.

- Grounded responses in a property-graph knowledge store plus a vector store; served through a Gradio interface.

LangGraph Agent Workflow

2025

ECIU AI Hackathon

LangGraph, LangChain, Agentic orchestration

Agentic LLM workflow modelling an interview and document-retrieval process as an explicit StateGraph with tool-using nodes.

- Orchestrated retrieval and decision steps as nodes and conditional edges in a LangGraph StateGraph.

Energy Consumption Forecasting — 1st Place

2024

SAIL & Baseline Energy Hackathon

CNN-LSTM, XGBoost, Forecasting

Won a UiS energy-forecasting hackathon (team of 2) with a hybrid CNN-LSTM to XGBoost model predicting electricity consumption.

- Hybrid CNN-LSTM feeding XGBoost; took first place in a two-person team.
