EDUCATION

University of Stavanger

Master of Science in Data Science – Thesis: GRAG vs RAG (partner: Laerdal Medical)

Stavanger, Norway

2022 – 2025

Nitte Meenakshi Institute of Technology

Bachelor of Engineering in Computer Science

Bangalore, India

2017 – 2021

EXPERIENCE

Nivel AS

Data Scientist

Stavanger, Norway

March 2025 – August 2026

- Built an analytics platform from scratch (Vue.js, Chart.js, Vite) on a BigQuery backend.
- Built ETL pipeline APIs into Google Cloud / BigQuery; maintained databases and Looker Studio reporting.
- Built a BigQuery MCP server so non-technical colleagues can query data in plain language.
- Run infrastructure on Kubernetes, GitLab, and AWS; integrated GIS into production.

Baseline Energy

ML/Python Developer

Stavanger, Norway

October 2024 – April 2025

- Contributed to the Euroflex project, shifting electricity consumption to improve grid reliability and cost-efficiency.
- Built LSTM forecasting models; developed FastAPI services (Redis, Docker, GitHub Actions CI/CD) on AWS/GCP.

University of Stavanger

Teaching Assistant

Stavanger, Norway

August 2023 – May 2025

- TA for Cloud Computing, Data-Intensive Systems, Intro to Data Science, and Databases; ran labs, supported and graded students (Spark, Databricks, Hadoop, SQL, Kubernetes).

Hack the Climate (Nordic Edge)

API & GIS Developer

Stavanger, Norway

December 2023 – May 2024

- Built LSTM and DDPG models to forecast agricultural nutrient runoff (5-person team on water pollution in Stavanger).
- Delivered a FastAPI/AWS GIS service with local authorities and Nordic Edge for smart environmental monitoring.

DNB

Software Engineering Intern

Oslo, Norway

June 2023 – August 2023

- Built a Streamlit dashboard to monitor the Financial Management Data Refinery engine's health.
- Designed a RESTful API for a mainframe-to-cloud migration (Azure, Python, Snowflake, Pydantic).

SKILLS

AI / ML: Python, Machine Learning, Deep Learning, NLP, LLMs, RAG/GRAG, Knowledge Graphs, TensorFlow, LSTM, DDPG

Cloud & DevOps: AWS, GCP, Azure, OpenStack, Kubernetes, Docker, GitLab CI/CD, GitHub Actions, dbt

Data & Analytics: BigQuery, Snowflake, Databricks, Spark/PySpark, Hadoop, SQL, ETL/ELT, Looker Studio, GIS

Development: FastAPI, REST APIs, Vue.js, Chart.js, Vite, Streamlit, Redis, Pydantic, Rasa, MCP servers

PROJECTS

Energy Consumption Forecasting (1st Place)

2024

SAIL & Baseline Energy Hackathon

CNN-LSTM, XGBoost, Forecasting

Won a UiS energy-forecasting hackathon (team of 2) with a hybrid CNN-LSTM to XGBoost model predicting electricity consumption.

Medical Emergency Agent

2025

Knowledge-Graph RAG

LLM Agent, RAG, Knowledge Graph, Gradio

LLM agent answering medical-emergency queries via retrieval-augmented generation over a property-graph knowledge store and call transcripts.

Atari Breakout with DQN

2024

Reinforcement Learning

Deep Q-Network, Python, RL

Deep Q-Network agent trained to play Atari Breakout, built as a modular, reproducible codebase with config-driven training and evaluation.
